Homework M5: Additional Techniques in AD

Main goal is to create a few GPOs. You can re-use the structure that we did during the practice. It is the following:

- Three VMs - DC (Server 2016/2019 GUI), GSERVER (Server 2016/2019 GUI), and CLIENT (Windows 10)
- AD structure:
    - Managed Computers OU
        - GSERVER
        - Sales Department OU
            - CLIENT
    - Managed Groups OU
        - GS Help Desk
        - GS IT (member of Domain Admins)
    - Managed Users OU
        - Ivan T. Ivanov (member of GS IT)
        - Sales Department OU
            - Gergana V. Petkova
            - Petya K. Georgieva
            - Stoyan I. Petkov

Tasks

Create the following GPOs:

1. Create GPO that installs **XmlNotepad** (download it from: https://github.com/microsoft/XmlNotepad) application to all servers in the **Managed Computers** OU
2. Create GPO that changes desktop wallpaper only for those users in the **Managed Users** OU who are members of **GS IT**
3. Create GPO that creates a shortcut to http://softuni.bg on the desktop for all users who are part of **Managed Users** OU but aren't members of GS IT
4. Create GPP that sets home page of **Internet Explorer** to http://google.com

Proof

Prepare a document that describes (with a command output, a picture, or with few sentences) how you managed to fulfill the requirements of each task.
